Our Credo

We believe our first responsibility is to the doctors, nurses and patients,
to mothers and fathers and all others who use our products and services.
In meeting their needs everything we do must be of high quality.

We must constantly strive to reduce our costs
in order to maintain reasonable prices.

Customers' orders must be serviced promptly and accurately.

Our suppliers and distributors must have an opportunity
to make a fair profit.

We are responsible to our employees,
the men and women who work with us throughout the world.

Everyone must be considered as an individual.

We must respect their dignity and recognize their merit.

They must have a sense of security in their jobs.

Compensation must be fair and adequate,
and working conditions clean, orderly and safe.

We must be mindful of ways to help our employees fulfill
their family responsibilities.

Employees must feel free to make suggestions and complaints.

There must be equal opportunity for employment, development
and advancement for those qualified.

We must provide competent management,
and their actions must be just and ethical.

We are responsible to the communities in which we live and work
and to the world community as well.

We must be good citizens — support good works and charities
and bear our fair share of taxes.

We must encourage civic improvements and better health and education.

We must maintain in good order
the property we are privileged to use,
protecting the environment and natural resources.

Our final responsibility is to our stockholders.

Business must make a sound profit.

We must experiment with new ideas.

Research must be carried on, innovative programs developed
and mistakes paid for.

New equipment must be purchased, new facilities provided
and new products launched.

Reserves must be created to provide for adverse times.

When we operate according to these principles,
the stockholders should realize a fair return.

Selection and use of surgical needles

Intelligent Geometry

A Unique Needle Range

ETHIGUARD Blunt Point Needles

Improving safety

Taper Point Needles

Gentle separation of fibrous tissue

BV Needles

Consistency pass after pass

VISI-BLACK Needles

Visibility is their strength

CC Needles

Easy penetration of calcified coronary tissues

HEMO-SEAL Needle Sutures

A fitting choice for vascular surgery

MULTICURVE Needles

For confined access procedures

TAPERCUT Needles

Easy penetration of dense tough tissue

PRIME Needles

Excellence in skin closure

Anatomy of a Needle

Needle Point Needles can taper to a point or have cutting edges.

Taper Ratio Longer points for improved penetration.

Needle Body

 **Needle flat** Flatted section for stability in the needle holder.

 **Ribs** In larger needles there is a ribbed section to provide a secure grip.

 **Square Body** Needles can also have a square body for increased strength.

Swage A hole is drilled into the end of the wire and the material is attached into this hole. For premium needles the needles are laser drilled which provides a smooth transition between needle and material thus reducing tissue trauma.

Needle Shape

The choice of needle shape is frequently governed by the accessibility of the tissue to be sutured, and normally the more confined the operative site the greater the curvature required. The basic shapes involved are:

Round Bodied needles

Round Bodied needles are designed to separate tissue fibres rather than cut them. They are used either for soft tissue or in situations where easy splitting of tissue fibres is possible. After the passage of the needle, the tissue closes tightly round the suture material, thereby forming a leak-proof suture line which is particularly vital in Intestinal and Cardio-vascular surgery.

Round Bodied needles are manufactured with different wire diameters according to the tissue to be sutured. For softer tissue such as bowel finer wire diameters can be used. Whereas for muscle or fascia heavier wire diameters are required.

TAPERPOINT Needle

This point profile is engineered to provide easy penetration of intended tissues. Forceps flats are formed in an area half way between the point and the attachment, Positioning the needle holder in this area confers extra stability on the needle being held, aiding precise placement of the sutures. Taper Point needles are available in a range of wire diameters and the finer diameters can be used for softer tissue in gastrointestinal or vascular procedures whereas heavier diameters are required for tougher tissue such as muscle.

TAPERPOINT Plus

A modified point profile for most of our needles. In a modified profile, the tapered cross section immediately behind the tip has been flattened to an oval shape rather than a conventional round shape. This continues for several millimeters before merging into the conventional round bodied cross section. This design was developed to help facilitate improved separation of tissue layers.

VISI - BLACK Needle

These black needles have been designed to give outstanding visibility against tissue and where blood is present in the operating field. The slim Taper Point design of the VISIBLACK Needle brings improved penetration properties and minimises tissue trauma.

ETHIGUARD Blunt Point Needle

The needles has been designed to minimise the risk of needle stick injury. The ETHIGUARD Needle point is sharp enough to penetrate fascia and muscle but not skin. Virtually eliminating accidental glove puncture, the ETHIGUARD Needle can also be used for suturing friable tissue such as the liver.

Blunt Point Needle

This needle has been designed for suturing extremely friable tissue such as the liver.

CC Needle

The unique point design of the CC Needle provides significantly improved penetration properties for the Cardiac / Vascular surgeon when suturing tough, calcified vessels. This is achieved with no increase in tissue trauma compared to the conventional round bodied needle. Squared body geometry, in addition to providing a stronger fine vascular needle, also means this needle is particularly secure in the needle holder.

TAPERCUT Needle

This needle combines the initial penetration of a cutting needle with the minimised trauma of a round bodied needle. The cutting tip is limited to the point of the needle, which then tapers out to merge smoothly into a round cross section.

Cutting Needles - for Fibrous Tissue

Cutting needles are required wherever fibrous or dense tissue needs to be sutured.

Reverse Cutting Needle

The body of this needle is triangular in cross section, having the apex cutting edge on the outside of the needle curvature. This improves the strength of the needle and particularly increases its resistance to bending.

TROCAR POINT Needle

Based on the traditional TROCAR POINT, this needle has a strong cutting head which then merges into a robust round body. The design of the cutting head ensures powerful penetration, even when deep in dense tissue.

Cutting Needles for Plastic and Cosmetic Surgery

PRIME and PRIME MULTIPASS needles

PRIME and PRIME MULTIPASS needles are manufactured with an exclusive needle tip design. The cross sectional geometry of the needle tip reduces the angles of the cutting edges which gives improved penetration and control.

A square body on the needle greatly increases needle strength and offers improved stability in the needle holder. PRIME needles are available with either a reverse cutting or a conventional cutting profile.

PRIME MULTIPASS needles offer PRIME geometry and advanced MULTIPASS needle coating technology.

SUPERIOR EASE OF PENETRATION

SUPERIOR RESISTANCE TO BENDING

Cutting Needles for Skin Closure

Conventional Cutting Needle

This needle has a triangular cross section with the apex of the triangle on the inside of the needle curvature. The effective cutting edges are restricted to the front section of the needle and merge into a triangulated body which continues for half the length of the needle.

Reverse Cutting Needle

The body of this needle is triangular in cross section, having the apex cutting edge on the outside of the needle curvature. This improves the strength of the needle and particularly increases its resistance to bending.

Ophthalmic Needles

These fine needles are manufactured using a unique process which ensures extremely sharp cutting edges. The range includes spatulated designs for suturing specific layers of the eye in Anterior Segment surgery in addition to round bodied, cutting and TAPERCUT designs for specific ophthalmic and oculoplastic procedures.

CS-ULTIMA Spatula Needle

This needle represents a dramatic change in ophthalmic needle design. Its concave spatula geometry requires considerably less force to penetrate corneal scleral tissue than existing needles. This results in much less disruption of the of the cornea and the real possibility of reduced post-operative suture related astigmatism.

ADVANCED MICRO-POINT Spatula Needle

Due to the ultra fine diameter of this needle, a new concept of design has been necessary. An extremely sharp cutting point has been merged into a square body to produce superb penetration characteristics. In addition, the square body greatly increases resistance to bending and gives much improved needle holder security, locking the needle at the correct angle for secure accurate suture placement.

MICRO-POINT Spatula Needle

This needle has a thin, flat profile which allows the needle to penetrate between the layers of scleral or corneal tissue.

SPATULATED Needle

Similar in cross section to MICRO-POINT Spatula needles, this is designed for scleral suturing which requires stronger needles and where the elimination of cut out or cut down by a third edge is essential.

MICRO-POINT Reverse Cutting Needle

The third cutting edge of this needle lies on the outside of its curvature, thereby eliminating the possibility of needle cut out during suture placement.

CONTROL RELEASE Needle Sutures

1. The needle is held securely in the needle holder. Suture is grasped securely just below needle, pulling strand taut.

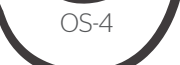

2. The needle is released with a straight tug of the needleholder.

Use of Needle Holders

- 1 The needle holder should be carefully selected to match the size and strength of the needle to be used. The use of a needle holder larger than required can result in damage to the needle and in particular, distortion of the curvature.
- 2 The needle holder should be in good condition as worn jaws can result in needle rotation and instability in the needle holder. Nicks or defects in the needle holder jaws can also cause damage to the needle and loss of strength.
- 3 Needles should be grasped securely on the tip of the needle holder jaws.
- 4 Needles should only be held in the flattened area provided and should not be grasped on the attachment area or near to the needle point. Needles which are not flattened should be grasped for placement at a point approximately one third of the needle length from the butt. Excessive force should not be applied when gripping the needle, particularly with Tungsten Carbide jaw inserts, as this may damage the needle body and cause loss of strength or breakage.

Use of Surgical Needles

- 1 The force required to achieve passage of the needle through tissue should be applied in a direction following the curvature of the needle.
- 2 Care should be taken to match the size of the needle to the size of tissue bite required. The use of too small a needle for a given tissue bite can lead to bending.
- 3 Should the placement of the needle in tissue require to be readjusted, the needle should be removed and re-inserted. No attempt should be made to twist the needle in tissue.
- 4 The needles should normally be inserted separately into each side of the tissue to be approximated and should not be used to bridge a wound.

VICRYL* Rapide

(Polyglactin 910) Suture

ETHICON

PART OF THE *Johnson & Johnson* FAMILY OF COMPANIES

VICRYL* Rapide (Polyglactin 910)

SUTURE

Description:	Braided	For easy handling and secure knot tying.
	Coated	For smooth passage through tissue and easy knot tie down.
	Synthetic	For minimal tissue reaction.
	Absorbable	By hydrolysis. Essentially complete in 42 days.

Tensile strength:	Post implantation	Approximate % original strength remaining
	5 days	50%
	10-14 days	0%

VICRYL* Rapide suture typically falls off 7-10 days post-operative or can be wiped off subsequently with gauze. Normally the removal of the suture is not required.

Color: Undyed or violet.

Range: 8-0 to 1 (USP). Supplied as needled sutures and ligatures.

Indications: VICRYL* Rapide is intended for use in soft tissue approximation where only short term wound support is required and where the rapid absorption of the suture would be beneficial. Typical areas of use include:

- Skin closure, cuticular or subcuticular
- Episiotomies
- Closure of oral mucosa
- Conjunctival sutures in ophthalmic surgery

Full details in the Instruction for Use included in every package.

7 days	60% (violet) 50% (undyed)
14 days	30% (violet) 20% (undyed)
21 days	0% (undyed)
28 days	0% (violet)

Color: Violet or undyed.

Range: 6-0 to 1 (USP). Supplied as needed sutures and ligatures.

Indications: MONOCRYL* sutures are intended for use in general soft tissue approximation and/or ligation where an absorbable material is indicated. Typical areas of use include:

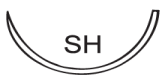

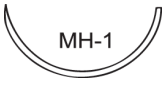

- Subcuticular sutures
- Small intestine anastomoses
- Urological anastomoses

Full details in the Instruction for Use included in every package.

MONOCRYL* Plus

(Poliglecaprone 25) Antibacterial Suture

ETHICON
PART OF THE *Johnson & Johnson* FAMILY OF COMPANIES

MONOCRYL* Plus

(Poliglecaprone 25) Antibacterial

SUTURE

Description: **Monofilament** For smooth passage through tissue.
Synthetic For minimal tissue reaction.
Absorbable By hydrolysis. Essentially complete in 90 -120 days.

Tensile strength: **Post implantation** **Approximate % original strength remaining**

7 days	60% (violet) 50% (undyed)
14 days	30% (violet) 20% (undyed)
21 days	0% (undyed)
28 days	0% (violet)

Color: Violet or undyed.

Range: 6-0 to 1 (USP). Supplied as needled sutures and ligatures.

Indications: MONOCRYL* Plus sutures are intended for use in general soft tissue approximation and/or ligation where absorbable material is indicated. Typical areas of use include:

- Subcuticular sutures
- Small intestine anastomoses
- Urological anastomoses

Protection against bacterial colonization

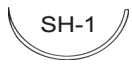

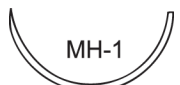

In vitro studies demonstrate, that MONOCRYL* Plus suture has a zone of inhibition that is effective against the pathogens that most frequently cause surgical site infection, including *Staphylococcus aureus*, methicillin resistant *Staphylococcus aureus* (MRSA), *Staphylococcus epidermidis*, methicillin resistant *Staphylococcus epidermidis* (MRSE), *E. coli* and *Klebsiella pneumoniae*.

Full details in the Instruction for Use included in every package.

VICRYL*

(Polyglactin 910) Suture

ETHICON

PART OF THE *Johnson & Johnson* FAMILY OF COMPANIES

VICRYL*

(Polyglactin 910) Braided and Monofilament

SUTURE

Description:	Braided	For easy handling and secure knot tying.
	Coated	For smooth passage through tissue and easy knot tie down.
	Synthetic	For minimal tissue reaction.
	Absorbable	By hydrolysis. Essentially complete in 56-70 days.

Tensile strength:	Post implantation	Approximate % original strength remaining
	14 days	75%
	21 days	50% (6-0 and larger)
		40% (7-0 and smaller)
	28 days	25% (6-0 and larger)

Color: Violet or undyed.

Range: 10-0 to 6 (USP). Supplied as needled sutures and ligatures. Sizes 10-0 and 9-0 are monofilament in structure.

Indications: VICRYL* sutures are intended for use in soft tissue approximation and/or ligation, including use in ophthalmic surgery, peripheral nerve adaptation and microsurgery for vessels less than 2 mm in diameter. Typical areas of use include:

- Fascia closure - due to the 28-day claim
- Subcutaneous fat
- Joint capsule
- Uterus

Full details in the Instruction for Use included in every package.

VICRYL* Plus

(Polyglactin 910) Antibacterial Suture

VICRYL* Plus

(Polyglactin 910) Braided Antibacterial

SUTURE

Description:	Braided	For easy handling and secure knot tying.
	Coated	For smooth passage through tissue and easy knot tie down.
	Synthetic	For minimal tissue reaction.
	Absorbable	By hydrolysis. Essentially complete in 56-70 days.

Tensile strength: Post implantation Approximate % of original strength remaining

14 days	75%
21 days	50%
28 days	25%

Color: Violet or undyed.

Range: 5-0 to 2 (USP). Supplied as needled sutures and ligatures.

Indications: VICRYL* Plus sutures are intended for use in soft tissue approximation and/or ligation, including use in microsurgery for vessels less than 2 mm in diameter. The safety and effectiveness of VICRYL* Plus sutures in cardiovascular tissue, ophthalmic surgery and neurological tissue have not been established. Typical areas of use include:

- Fascia closure - due to the 28-day claim
- Subcutaneous fat
- Joint capsule
- Uterus

Protection against bacterial colonization

In vitro studies demonstrate, that VICRYL* Plus suture has a zone of inhibition that is effective against the pathogens that most frequently cause surgical site infection, including *Staphylococcus aureus*, methicillin resistant *Staphylococcus aureus* (MRSA), *Staphylococcus epidermidis* and methicillin resistant *Staphylococcus epidermidis* (MRSE).

Full details in the Instruction for Use included in every package.

PDS* II

(Polydioxanone) Suture

PDS* II

(Polydioxanone) Monofilament

SUTURE

Description: **Monofilament** For smooth passage through tissue.
Synthetic For minimal tissue reaction.
Absorbable By hydrolysis. Essentially complete in 182-238 days.

Tensile strength: **Post implantation** **Approximate % original strength remaining**

14 days 80% (3-0 and larger)
60% (4-0 and smaller)

28 days 70% (3-0 and larger)
40% (4-0 and smaller)

42 days 60% (3-0 and larger)
35% (4-0 and smaller)

Color: Violet or undyed.

Range: 7-0 to 2 (USP). Supplied as needed sutures and ligatures.

Indications: PDS* II sutures are intended for use in general soft tissue approximation, including use in pediatric cardiovascular tissue, in microsurgery and in ophthalmic surgery. PDS* II sutures are particularly useful where the combination of an absorbable suture and extended wound support is desirable. Typical areas of use include:

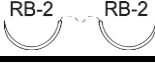

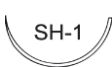

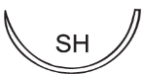

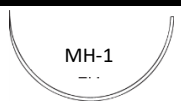

- Abdominal wall closure
- Intestinal anastomoses
- Ligament and tendon repair

Full details in the Instruction for Use included in every package.

ETHICON

PART OF THE *Johnson & Johnson* FAMILY OF COMPANIES

PDS* PLUS

(Polydioxanone) Antibacterial Monofilament

SUTURE

Description: **Monofilament** For smooth passage through tissue.
Synthetic For minimal tissue reaction.
Absorbable By hydrolysis. Essentially complete in 182-238 days.

Tensile strength: **Post implantation** **Approximate % of original strength remaining**

14 days	80% (3-0 and larger)
	60% (4-0 and smaller)
28 days	70% (3-0 and larger)
	40% (4-0 and smaller)
42 days	60% (3-0 and larger)
	35% (4-0 and smaller)

Color: Violet or undyed

Range: 6-0 to 1 (USP). Supplied as needled sutures and ligatures.

Indications: PDS* Plus Antibacterial Sutures are intended for use in general soft tissue approximation, including in paediatric cardiovascular tissue, and in ophthalmic surgery (other than contact with cornea and sclera). PDS* Plus Antibacterial Sutures are particularly useful where the combination of absorbable suture and extended wound support is desirable. Typical areas of use include:

- Abdominal wall closure
- Intestinal anastomoses
- Ligament and tendon repair

Protection against bacterial colonization

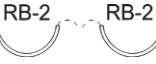

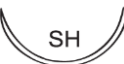

In vitro studies demonstrate, that PDS* Plus Antibacterial Suture has a zone of inhibition that is effective against the pathogens that most frequently cause surgical site infection, including Staphylococcus aureus, methicillin resistant Staphylococcus aureus (MRSA), Staphylococcus epidermidis, methicillin resistant Staphylococcus epidermidis (MRSE), E. coli and Klebsiella pneumoniae.

Full details in the Instruction for Use included in every package.

PROLENE*

Monofilament Polypropylene

SUTURE

Description: **Monofilament** For smooth passage through tissue.
Synthetic For minimal tissue reaction.
Non-absorbable Provides permanent tensile strength retention in tissue.

Color: Blue or clear.

Range: 10-0 to 2 (USP). Supplied as needled sutures, armed with, for example, EVERPOINT* Tungsten-Rhenium needles, VISI-BLACK* needles, MULTIPASS* needles or CC-needles. Also available with pledgets.

PROLENE* sutures are also available as HEMO-SEAL*, with suture diameter to needle diameter ratio close to 1. HEMO-SEAL* is particularly useful in reducing needle hole leakage (for example in synthetic vascular grafts).

Indications: PROLENE* sutures are intended for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic and neurosurgical procedures. Typical areas of use include:

- Cardiovascular anastomoses
- Subcuticular sutures

Full details in the Instruction for Use included in every package.

PROLENE* Monofilament Polypropylene

ETHILON*

(Polyamide 6) Suture

ETHICON
PART OF THE *Johnson & Johnson* FAMILY OF COMPANIES

ETHILON*

Monofilament Polyamide 6

SUTURE

Description: **Monofilament** For smooth passage through tissue.
 Synthetic For minimal tissue reaction.
 Non-absorbable Provides prolonged tensile strength retention in tissue.

Color: Blue, black or clear.

Range: 11-0 to 2 (USP). Supplied as needled sutures armed with, for example, MULTIPASS* and PRIME* needles. ETHILON* is also available as ligatures.

Indications: ETHILON* (black and clear) sutures are intended for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic, microsurgical and neurosurgical procedures. Blue ETHILON* sutures are intended for use in skin closure. Typical areas of use include:

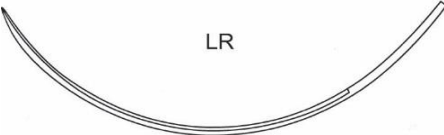

- Cuticular sutures
- Nerve adaptation
- Ophthalmology

Full details in the Instruction for Use included in every package.

ETHILON* Monofilament Polyamide 6

ETHIBOND* Excel

(Polybutylate Coated Polyester) Suture

ETHICON

PART OF THE *Johnson & Johnson* FAMILY OF COMPANIES

ETHIBOND* Excel

Polybutylate Coated Polyester

SUTURE

Description:

Braided	For easy handling and secure knot tying.
Coated	For smooth tie down and easy passage through tissue.
Synthetic	For minimal tissue reaction.
Non-absorbable	Provides permanent tensile strength retention in tissue.

Color:

Green or white.

Range:

7-0 to 6 (USP). Supplied as needled sutures or ligatures. With or without pledgets.

Indications:

ETHIBOND* sutures are intended for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic and neurosurgical procedures. Typical areas of use include:

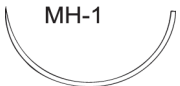

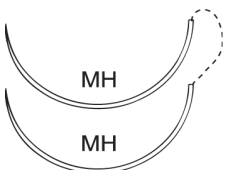

- Heart valve fixation
- Ligament and tendon repair
- Retraction sutures

Full details in the Instruction for Use included in every package.

SUTURE

Description:

Braided	For easy handling and secure knot tying.
Synthetic	For minimal tissue reaction.
Non-absorbable	Provides permanent tensile strength retention in tissue.

Color:

Green or white.

Range:

10-0 to 3 (USP). Supplied as needed sutures or ligatures. Size 10-0 is monofilament in structure.

Indications:

MERSILENE* sutures are intended for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic and neurosurgical procedures. Typical areas of use include:

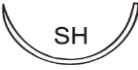

- Dental surgery
- Ophthalmic surgery
- Ligation

Full details in the Instruction for Use included in every package.

PRONOVA*

(Poly(hexafluoropropylene-VDF)) Suture

ETHICON

PART OF THE *Johnson & Johnson* FAMILY OF COMPANIES

PRONOVA*

Poly(hexafluoropropylene-VDF)

SUTURE

Description: **Monofilament** For smooth passage through tissue.
 Synthetic For minimal tissue reaction.
 Non-absorbable Provides permanent tensile strength retention in tissue.

Color: Blue.

Range: 8-0 to 5-0 (USP). Supplied as needled sutures, armed with, for example, VISI-BLACK* needles or CC-needles.

Indications: PRONOVA* sutures are intended for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic and neurosurgical procedures. Typical areas of use include:

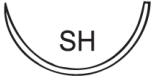

- Vascular anastomoses

Full details in the Instruction for Use included in every package.

SILK

Braided Silk / Virgin silk

SUTURE

Description:

Braided	For easy handling and secure knot tying.
Coated	With wax for easy handling.
Natural	Produced from cocoons of the silk worm <i>Bombyx Mori</i> .
Non-absorbable	Provides prolonged tensile strength retention in tissue for up to 3 months.

Color:

Black or white.

Range:

10-0 to 4 (USP). Supplied as needed sutures or ligatures. Sizes 10-0 to 8-0 are manufactured of virgin silk and are twisted in construction. Virgin silk fibres are held together by natural gum secreted by the silk worm.

Indications:

SILK sutures are intended for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic and neurosurgical procedures. Typical areas of use include:

- Ophthalmic surgery
- Dental surgery
- Ligation

Full details in the Instruction for Use included in every package.

STEEL

Suture

ETHICON

PART OF THE *Johnson & Johnson* FAMILY OF COMPANIES

STEEL

Monofilament and Multifilament

SUTURE

Description:

Multifilament or monofilament.

Non-absorbable Provides permanent tensile strength retention in tissue.

Color:

Undyed.

Range:

5-0 to 7 (USP). Supplied as needled sutures and ligatures. Also available as pull-out tendon suture with barb.

Indications:

STEEL sutures are intended for use in abdominal wall closure, hernia repair, sternal closure and orthopedic procedures including cerclage and tendon repair.

Typical areas of use include:

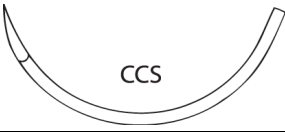

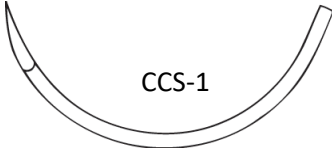

- Closure of sternum
- Pull-out tendon repair with the Bunnell technique

Full details in the Instruction for Use included in every package.

NUROLON*

(Polyamide 6/6) Suture

NUROLON*

Polyamide 6/6

SUTURE

Description:

Braided	For easy handling and secure knot tying.
Coated	For easy passage through tissue.
Synthetic	For minimal tissue reaction.
Non-absorbable	Provides prolonged tensile strength retention in tissue.

Color: Black.

Range: 5-0 to 1 (USP). Supplied as needed sutures or ligatures.

Indications: NUROLON* sutures are intended for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic and neurosurgical procedures. Typical areas of use include:

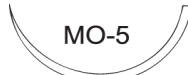

- Drain fixation
- Ligation

Full details in the Instruction for Use included in every package.

Stratafix™

STRATAFIX™ Knotless Tissue Control Device

EMEA Portfolio Product Catalogue 2019/20

A versatile portfolio to meet your wound closure needs

ETHICON
PART OF THE *Johnson & Johnson* FAMILY OF COMPANIES

Shaping
the future
of surgery

STRATAFIX™ Knotless Tissue Control Devices

A versatile portfolio to meet your wound closure needs

Multiple anchor designs and patterns provide more versatility^{1,3}

STRATAFIX™ Symmetric PDS™ Plus Knotless Tissue Control Device

The **only** knotless tissue device that provides strong, secure closure appropriate for high-tension areas such as **fascia**^{1,*}

Symmetric

Superior tissue holding strength

STRATAFIX™ Symmetric PDS™ Plus Knotless Tissue Control Device demonstrated superior tissue holding strength compared to interrupted technique with Coated VICRYL™ (polyglactin 910) Suture, continuous technique with PDS™ II (polydioxanone) Suture, and VLoc™ 180 Wound Closure Device.^{1,9}

**

STRATAFIX™ Symmetric PDS™ Plus Device offers **Plus antibacterial technology** to address known risk factors associated with SSI¹

* Refers to STRATAFIX™ Symmetric PDS™ Plus Knotless Tissue Control Device Only.

**The petri dish image is for illustrative purposes only, zone of inhibition testing results can vary.

STRATAFIX™ Spiral Knotless Tissue Control Device

A broad range of **bidirectional** and **unidirectional** devices, offers the **smooth glide** of a traditional suture^{1,2-8}

Spiral

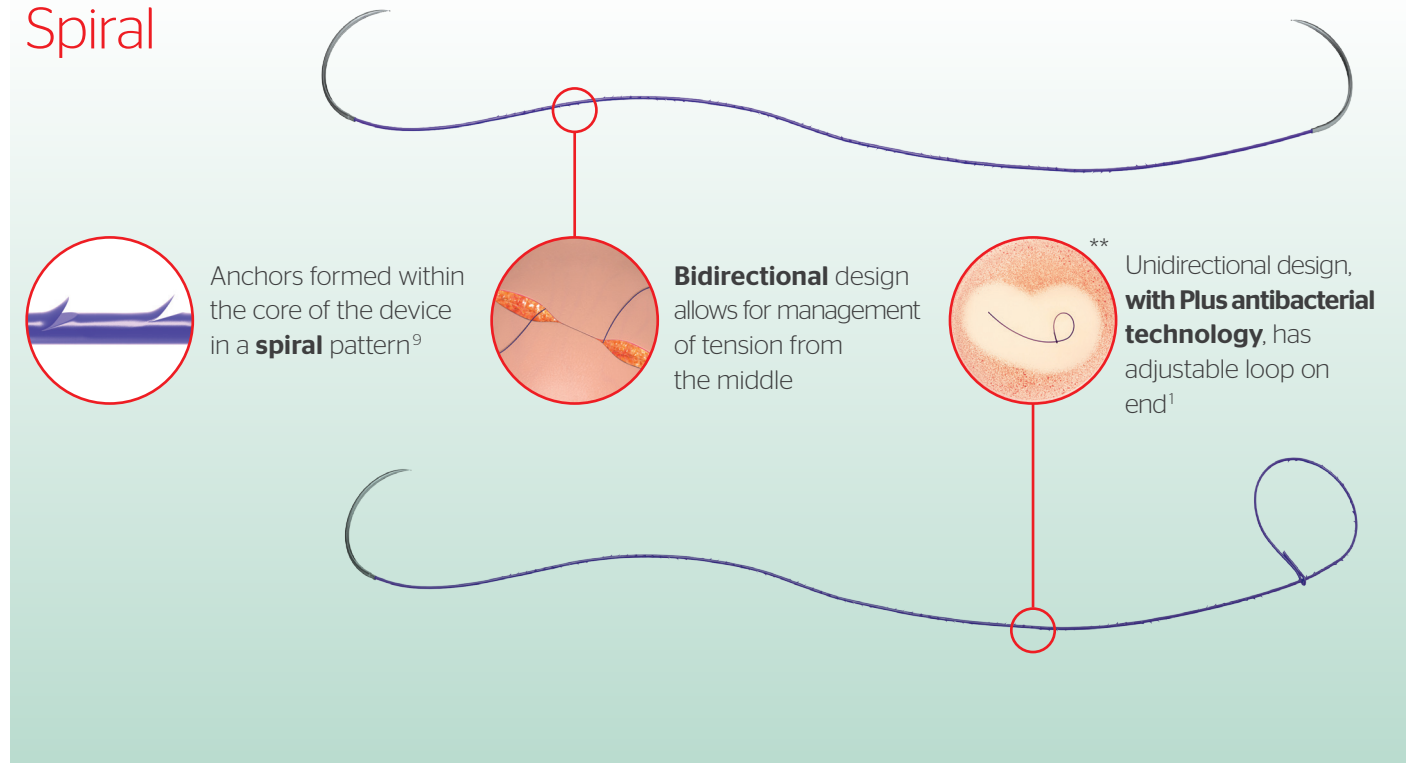

Anchors formed within the core of the device in a **spiral** pattern⁹

Bidirectional design allows for management of tension from the middle

Unidirectional design, **with Plus antibacterial technology**, has adjustable loop on end¹

*Sizing shown represents tensile strength. See IFU for additional information.

In a pre-clinical study, STRATAFIX™ Symmetric PDS™ Plus Knotless Tissue Control Device provided greater wound holding strength than traditional running sutures of the same size and polymer, while eliminating knot-related complications.^{1,10}

- **Only Ethicon** offers tissue control devices, with Plus antibacterial technology, that provide appropriate strength for closing high-tension areas, such as **fascia**^{1, **}
- **Superior tissue holding strength** compared to interrupted technique with Coated VICRYL™ (polyglactin 910) Suture, continuous technique with PDS™ II (polydioxanone) Suture, and V-Loc™ 180 Wound Closure Device.^{1,10}
- **Plus Antibacterial technology** designed to address a known risk factor for SSIs¹

STRATAFIX™ Spiral Knotless Tissue Control Device: **Unidirectional**

Provides added consistency and efficiency for skin and subcutaneous tissue where tension has been relieved by deeper closure.¹

- Closure begins at one end of an incision, for a familiar wound-closure technique¹
- Adjustable fixation loop secures the device without the need for tying a knot¹
- Suitable for organ closure when additional tension control is appropriate
- Offers Plus antibacterial technology to address risk factors associated with SSI^{11,12}

STRATAFIX™ Spiral Knotless Tissue Control Device: **Bidirectional**

Allows for management of tension from the middle for control over tissue approximation in challenging conditions like non-linear incisions and larger open wounds.

- Secured with a backstitch or lateral stitch on both ends to finish
- 360-degree spiral anchor patterns¹
- Bidirectional anchors start in the middle and move toward the needles on each end⁹

With significantly more points of fixation than traditional sutures, STRATAFIX™ Knotless Tissue Control Devices provide a combination of **more security**, **more consistency**, and **more efficiency**.^{1,3, 5,7}

Only Ethicon offers tissue control devices, with Plus antibacterial technology, that provide appropriate strength for closing high-tension areas, such as **fascia**.^{1,‡}

* Please always refer to the Instructions for Use / Package Insert that come with the device for the most current and complete instructions.

Other Products

DERMABOND™

Beyond sutures and staples lies a more innovative solution

DERMABOND™ PRINEO™ Skin Closure System (22 cm)

Powerful combination of 2-octyl cyanoacrylate (2-OCA) and self-adhering mesh

Protection

- Provides a flexible microbial barrier with 99% protection in vitro for 72 hours against organisms commonly responsible for SSIs.^{1*}
 - Demonstrates in vitro inhibition of gram-positive (MRSA and MRSE) and gram-negative bacteria (E. coli)^{2†}

Strength

- statistically significant greater skin holding strength than skin staples or subcuticular 4-0 MONOCRYL™ (poliglecaprone 25) suture^{4‡}
- Redistributes tension away from the wound to the surrounding healthy surface area¹⁰

Patient Satisfaction

- Patient may be able to shower immediately after the procedure, if directed by the healthcare professional⁵
- At the time of removal, DERMABOND™ PRINEO™ System is associated with less pain than other wound closure devices⁶
- No post-surgical dressings may mean easier self-care and greater self-confidence for patients⁷

ETHICON
PART OF THE *Johnson & Johnson* FAMILY OF COMPANIES

Shaping
the future
of surgery

*Staphylococcus epidermidis, Escherichia coli, Staphylococcus aureus, Pseudomonas aeruginosa, and Enterococcus faecium
†Clinical significance unknown
‡In an ex-vivo study, more load in N was required to create a 3±1 mm gap between skin edges approximated with DERMABOND PRINEO System, than with subcuticular 4-0 MONOCRYL™ Suture or PROXIMATE Ethicon Endo-Surgery skin staples (p=0.00).

PRINEO*

Skin Closure System

PRINEO* Skin Closure System is intended to replace subcuticular/ intradermal suturing when there is no tension on the wound or when tension has been relieved by deep dermal or subcutaneous sutures.

PRINEO* Skin Closure System significantly reduces closure time by combining advanced mesh technology with a topical skin adhesive. The system provides microbial barrier and maintains skin approximation until removed. Enables patients to shower immediately following a procedure.

PRINEO* Skin Closure System consists of a self adhering, pressure-sensitive adhesive (PSA), polyester-based mesh for temporarily holding together the approximated skin edges of an incision and a 2-octyl cyanoacrylate liquid adhesive formulation for final skin/wound closure of incisions

Time Savings

- OR procedure time
- Anesthesia
- Post-Op Management

Suture Closure Equivalence

- Equivalent or Better Dehiscence
- Equivalent or Better Cosmesis

Ease of Use

- Wound Edge Approximation
- Minimal Learning Curve

Patient Comfort

- Ability to Shower Immediately
- No Blistering

Other products

INTRODUCING DERMABOND ADVANCED

Product Overview

- Superior strength and microbial protection versus other commercially available topical skin adhesives_{2,3}
- Single-layer application and reduced drying time₂

Product Performance

- Adds 75% more strength to the wound closure than sutures alone, when used in addition to sutures₂
- In vitro inhibition of gram-positive bacteria (MRSA and MRSE) and gram-negative bacteria (E coli)*
- Provides a microbial barrier with >99% protection in vitro for at least 72 hours against organisms commonly responsible for SSIs_{4**}

Patient benefits

DERMABOND® Adhesive has benefits that enhance patient comfort and satisfaction_{5,6}, such as:

- Excellent cosmesis_{7,8}
- Ability to shower immediately after application₉
- No need to remove sutures or change dressings₇

Other products

BLAKE* Silicone Drains

BLAKE Drains offer excellent drainage with four continuous channels that provide greater tissue contact area than regular perforated drains in addition to multiple drainage routes to resist clogging.¹ BLAKE Drains are constructed of silicone, with a solid-center design for strength and flexibility.

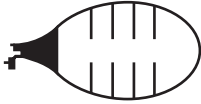

The drains are available with and without Ethicon's patented bendable TROCAR technology, which can be angled to facilitate easier placement of the drain (Round Hubless BLAKE Drains only).

The design of the drains allows greater patient comfort and enhanced ambulation. Patients experience less discomfort upon removal, greater ease of mobility postoperatively, and less discomfort during patient movement and deep breathing exercises.^{2,3,4}

POWERSTAR* bipolar scissors

BIPOLAR SCISSORS FOR OPEN SURGERY

PowerStar scissors are multifunctional, for precise cutting, dissecting and achieving hemostasis with one instrument.

This leads to fewer instrument changes, thus reducing operating time and allowing an uninterrupted focus on the surgical site.

The safety of advanced bipolar technology mini-mises undesired collateral tissue damage, as the current only passes through the tissue between the blades.

Because of the short bipolar current pathway, PowerStar may be a safer alternative to monopolar surgery in patients with pacemakers or implants and may reduce ECG interferences.

The two blades of the scissors are insulated from one another to form the active electrodes of the bipolar instrument. This is achieved by applying a ceramic coat to one surface of the scissor blade and clear surface hardening to the other. An insulated screw is inserted and the handles are coated.

PowerStar scissors are available in various lengths and designs to best suit your requirements. Cables with different connectors can be obtained to ensure compatibility with most electrosurgery generators.

ETHICON SECURESTRAP™

Superior and consistent holding strength
when deployed at various angles¹

1
Avoid empty releases
Low Strap Indicator Window indicating when device is nearing completion of straps

2
Accurate strap placement
Positioning tip on end of cannula facilitates mesh placement. Orientation marks help target mesh fibers

4
Less permanent foreign body material
Secure mesh fixation during the tissue integration period. The polymer absorption is essentially complete at approx. 12 months

3

Consistent strap deployment⁴

When the trigger is depressed a spring inside the handle is compressed. At full stroke, the spring is released, deploying the strap with the same consistency from the first strap to the last

2

5

Clear visibility

Synthetic absorbable straps dyed purple for clear visibility in the abdominal cavity

OPSTRAP20R	Single-unit device with 20 absorbable straps	1 device per box

PROLENE® Polypropylene Mesh

Product Description

PROLENE® Polypropylene Mesh is constructed of knitted, nonabsorbable filaments of an isotactic crystalline stereoisomer of polypropylene, a synthetic linear polyolefin—in identical in composition to that used in PROLENE® Polypropylene Suture

Top Benefits

- High burst strength and tensile strength³
- Construction permits the mesh to be cut and sized into any desired shape or size without unraveling

Mesh Facts

Core Mesh Material	PROLENE® Polypropylene Suture
Pore Size ⁵	< 1 mm
USP	#4-0
Partially Absorbable	No
Weight	> 95 g/m ²
Customizable	Yes
Shelf Life	5 years
Tissue Separating Barrier	None

PROLENE® Soft Polypropylene Mesh

Product Description

PROLENE® Soft Mesh is knitted by a process which interlinks each fiber junction and which provides for elasticity in both directions. This construction permits the mesh to be cut into any desired shape or size without unraveling. The bi-directional elastic property allows adaptation to various stresses encountered in the body.⁶

Top Benefits

- Large-pore, macroporous mesh for necessary tissue ingrowth⁶
- Unique design with 50% more flexibility than standard microporous polypropylene mesh for potentially improved patient comfort^{6,7†}
- Does not stretch or bulge over time for a secure repair⁶
- Can be cut to desired shape or size without unraveling⁶

Mesh Facts

Core Mesh Material	PROLENE® Polypropylene Suture
Pore Size ^{8A}	2.38 ± 0.03 mm
USP	#6-0
Partially Absorbable	No
Weight ⁴	45 g/m ²
Customizable	Yes
Shelf Life	5 years
Tissue-separating Barrier	None

* PROLENE Soft Mesh is the nonabsorbable component of PROCEED Mesh.^{6,7}

† Data from a prospective longitudinal study of 82 patients receiving open hernia repair using PROCEED® Surgical Mesh from the International Hernia Mesh Registry.⁷

ULTRAPRO ADVANCED™ Macroporous Partially Absorbable Mesh

Designed for exceptional intraoperative handling

- Blue orientation stripes facilitate orientation and placement and provide clear visualisation of the underlying anatomy⁹
- Surgeons rated ULTRAPRO ADVANCED™ Mesh highest in overall handling in open and laparoscopic repairs versus other meshes studied^{8B*}
- Springs open when passed through a trocar in laparoscopic repairs for easier handling and placement

* After performing an open and laparoscopic handling evaluation (n=10) for onlay and sublay/retromuscula placement.^{8B}

Inspired by your needs – designed with advanced features to benefit you and your patients

Advanced features of ULTRAPRO *ADVANCED*™ Mesh

Physiologically designed for comfortable healing

- Flexible in a way that approximates the natural movement of the abdominal wall, with 2:1 stretch^{10, 11, 8C*†}
- Unique knitted mesh construction promotes good tissue ingrowth/tissue integration^{8D‡}

Balanced strength for strong and lasting repair

- High suture pullout strength^{8G}
- High tensile strength^{8G}
- Withstands $\approx 2x$ maximum intraabdominal pressure^{8G, 8E, 12}
- No bulge visible in a preclinical study of ULTRAPRO *ADVANCED*™ Mesh at 28 and 91 days^{8D‡}

Mesh Facts

Core Mesh Material	PROLENE® Polypropylene Suture
Pore Size ^{8F}	2.7 mm
USP	#6-0
Partially Absorbable	Yes, MONOCRYL® (Poliglecaprone -25), USP #5-0
Weight ^{8C}	39 g/m ²
Customizable	Yes
Shelf Life	2 years
Tissue-separating Barrier	None

* The abdominal wall stretches 2:1 at the linea alba (longitudinal to transversal).¹⁰

† Compared with ULTRAPRO® Macroporous Partially Absorbable Mesh, which has 4:1 stretch as determined in stripe tensile test when force of 2N applied.^{8C}

‡ Evidence shown in an animal model.^{8D}

ULTRAPRO™ Mesh

Macroporous partially absorbable and lightweight for natural abdominal wall function

- For lap. Inguinal hernia repair
- For open inguinal/lichtenstein
- For open incisional/ventral hernia repair

Unique combination

Made up of equal parts of non-absorbable polypropylene fibres (PROLENE™) and absorbable polyglycaprone fibres (MONOCRYL), giving this the properties of large-pore mesh(3-4mm) MONOCRYL fibres reinforce the mesh making it easier to position. MONOCRYL is absorbed within 90 - 120 days.

Light-weight PROLENE™ Mesh remains in the body. Formation of a flexible collagen fibre network instead of a rigid scar formation.

Life-long safety

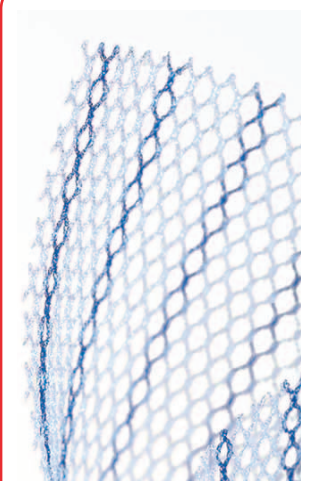

Low recurrence rate due to permanent stabilisation ULTRAPRO Mesh exhibits extremely low shrinkage (average 1.9 %) and is therefore extremely suited to hernia repair (Heniford surg. INNO 205)

(Köckerling surg endosc.2007)

A lifetime of comfort for your patients

Macroporous partially absorbable lightweight meshes are clinically proven to cause less pain and discomfort than heavyweight meshes.

(Bringman et al. BJoS 2006)

PROCEED™ Ventral Patch - PVP™

For open hernia repair IPOM

Macroporous and partially absorbable tissue-separating device.

For comfortable healing of umbilical hernias and other fascial deficiencies.

Allows your patients to heal naturally without compromising on strength

Builds on PROCEED™ Surgical Mesh technology.

Unique design contours with the body for secure placement and stable positioning.

Macroporous, lighter-weight mesh for strong tissue integration and a natural healing process.

Partially Absorbable technology leaving minimal amount of permanent foreign material.

No ePTFE.

PVP™ upon deployment

PVP™ at 14 days

Hernia Solutions

ULTRAPRO™ Hernia System, UHS

Macroporous partially absorbable and light weight for natural abdominal wall function.
For open inguinal hernia repair.

UHS Posterior and Anterior view

3-In-1 device for the combined anterior & posterior open repair of groin hernias

- Onlay patch covers the inguinal canal floor.
- Connector - secures the underlay which virtually eliminates migration.
- Underlay - provides posterior support. MONOCRYL film allows consistent, wrinkle-free deployment.

SURGICEL™ Powder
Absorbable Haemostat

Presenting SURGICEL Powder

Built to stop continuous,
broad-surface oozing*—fast** 1-4

*Continuous oozing defined as bleeding that will not stop with compression / simple packing

**TTH study of surgicel powder show average time to haemostasis of 30 seconds

***is ready to use out of the package with no preparation required

ETHICON

The next generation of SURGICEL™ Absorbable Haemostats

SURGICEL™ Powder Absorbable Haemostat
provides efficient control of continuous
oozing on broad surfaces*^{2,5}

- Ready to use out of the package, with no preparation required^{3,15}
- Penetrates through the blood to stop bleeding at the source, effectively achieving haemostasis in a wet field^{6,7}
- After haemostasis has been achieved, the bleeding site will not rebleed even if SURGICEL Powder is irrigated^{7**}

Everything you've come to expect from the SURGICEL™ Family of Absorbable Haemostats

- Proven bactericidal in vitro against a broad range of gram-positive and gram-negative organisms, including various antibiotic-resistant bacteria (MRSA, VRE, PRSP and MRSE)^{3,15}
- Fully absorbable within 7 to 14 days^{13,14}
- Contains an aggregate of ORC fiber fragments that help control capillary, venous, and small arterial hemorrhages^{2,3,†}

Precise delivery control regardless of device orientation¹¹

Flexible Tip:

The flexible tip on the applicator allows for aspiration in any direction in open procedures^{2,9}

Efficient Aspiration:

Modulates the amount of powder per pump for consistent expression regardless of device orientation.¹¹

*Continuous oozing defined as bleeding that will not stop with compression / simple packing

**Based on a preclinical animal study

†when ligation or other conventional methods of control are impractical or ineffective.

SURGICEL™

Family of Absorbable Haemostats

One family. **Five products.** 50+ years.

SURGICEL™ Original
Absorbable Haemostat

SURGICEL™ FIBRILLAR™
Absorbable Haemostat

SURGICEL® Powder
Absorbable Haemostat

SURGICEL SNOW™
Absorbable Haemostat

SURGICEL NU-KNIT™
Absorbable Haemostat

The SURGICEL Family provides a breadth of solutions for all continuous oozing bleeding situations. Continuous oozing: Bleeding that will not stop with compression/simple packing. The solution for this bleeding is more time consuming than it is difficult.

Get to the source of the bleed

The structure of the powder allows it to penetrate the surface of the blood to get to the source of bleeding⁶

- 1** Oxidized regenerated cellulose (ORC) in powder form allows for efficient coverage of broad surfaces⁵

SURGICEL Powder is an aggregate of small oxidized regenerated cellulose (ORC) fiber fragments^{2,3}

- 2** SURGICEL™ Powder Absorbable Haemostat provides a surface for platelet adhesion and aggregation, working with the patient's endogenous clotting factors to initiate clot formation¹⁰

- 3** Built to stop continuous, broad-surface oozing*—fast **^{1,4}

- 4** After haemostasis has been achieved, irrigation of excess powder can be performed and the bleeding site will not re-bleed^{7†}

Indication:

SURGICEL Powder (oxidised regenerated cellulose) is used adjunctively in surgical procedures to assist in the control of capillary, venous, and small arterial haemorrhage when ligation or other conventional methods of control are impractical or ineffective.³

*Continuous oozing defined as bleeding that will not stop with compression / simple packing

**TTH study of surgical powder show average time to haemostasis of 30 seconds

***is ready to use out of the package with no preparation required

†Based on a preclinical animal study

Built on a legacy of performance

SURGICEL™ Powder Absorbable Haemostat is an addition to the SURGICEL™ Family of Absorbable Haemostats

SURGICEL® SNoW®

SURGICEL® NU-KNIT

SURGICEL® FIBRILLAR

SURGICEL® ORIGINAL

SURGICEL[®]
SNoW[®]
ABSORBABLE HAEMOSTAT

Structured **No-W**oven Material

SURGICEL[®] SNoW[®] Haemostat
Magnified 75X

VS.
OPEN KNIT

SURGICEL[®] Original Haemostat
Magnified 75X

SURGICEL® SNoW®

The Adaptable SURGICEL® Haemostat
Haemostasis **43% faster** than SURGICEL® Original¹

Structured Non-Woven material provides:

SPEED

- **43% faster** time-to-haemostasis than SURGICEL® Original Absorbable Haemostat¹

HANDLING

- Enhanced conformability and adherence to the bleeding site²
- Easy to reposition without sticking to instruments²
- Easily deploys down the trocar and unfurls without sticking to instruments²

PERFORMANCE

- Proven bactericidal properties^{3,5}

Well suited for a broad range of open and minimally invasive procedures

SURGICEL®

SNoW®

ABSORBABLE HAEMOSTAT

SURGICEL® NU-KNIT

The Strong SURGICEL® Haemostat
Haemostasis **29% faster** than SURGICEL® Original⁴

Dense knit material provides:

STRENGTH

- Tensile strength in presence of heavy bleeding
- Thick wave designed to stay together during surgery
- Soft, pliable weave designed to support organ suture and for placement on delicate tissue

VERSATILITY

- Wrap organs with it, suture it in place, insert it through a trocar, for unsurpassed application control⁸

Ideal for use in trauma, laparoscopic surgery, sternotomies and solid organs

SURGICEL®

NU-KNIT®
ABSORBABLE HAEMOSTAT

SURGICEL® FIBRILLAR

The Versatile SURGICEL® haemostat
Haemostasis **39% faster** than SURGICEL® Original⁴

Unique ORC-fibril technology delivers :

VERSATILITY

- Visualize and work on bleeding site through thin layers
- 7 layers to be used one by one for broader surface area coverage or all together for heavier bleeding
- Lightweight layers and tufts-peel off as much or as little as desired
- Use it in any size, shape, or thickness¹⁰-Peel it off, roll it up, apply it in tufts, ball it up

OPTIMAL ADHERENCE & CONFORMABILITY

- Soft, layered material conforms and “melts in” to bleeding tissue and irregular surfaces, whatever their shape
- For difficult to reach places, works even against gravity

Well suited for use in CV, Neurosurgery, General surgery, Urology and Ob/Gyn procedures

SURGICEL®

FIBRILLAR™
ABSORBABLE HAEMOSTAT

SURGICEL® ORIGINAL

Trusted Performance
for more than 50 years

Proprietary ORC manufactured sheer
weave provides :

EXCELLENT HAEMOSTASIS WITH OPTIMAL HANDLING

- Proven record of safety and efficacy for a broad range of bleeding situations^{4,8}
- Sheer weave allows visibility of the bleeding site
- Flexible texture conforms to irregular surfaces

SURGICAL CONFORMABILITY

- Compatible with electrocautery
- Easily cut or folded for use in open and endoscopic procedures⁸

*Appropriate for a wide variety of procedures
in most surgical specialties⁸*

SURGICEL®

ORIGINAL
ABSORBABLE HAEMOSTAT

Stop bleeding fast...

...with four proven performers

SURGICEL® Absorbable Haemostats have been trusted **for more than half a century** to stop surgical bleeding with proven safety and efficacy, convenience and bactericidal properties⁴⁻⁹.

PROVEN SAFETY

- Plant based: No risk of animal or human borne contaminants
- Fully absorbable in 7-14 days^{4,8}
- Proprietary ORC technology⁴

PROVEN EFFICACY

- Used over 100 million times worldwide for more than 50 years
- Used in more hospitals than any other absorbable haemostat product

CONVENIENCE

- Ready and easy to use
- Flexible and malleable, can be cut to size
- Long shelf life at room temperature
- Ideal for a wide range of specialties and procedures

BACTERICIDAL ADVANTAGE

- Proven effective against a broad range of gram-negative and gram-positive organisms^{4,5}

Trusted by surgeons for more than half a century to stop bleeding fast

- Proprietary ORC technology⁴
- Safe – plant based product⁸
- Bactericidal advantage⁴⁻⁷

ETHICON™ | Biosurgery
a Johnson & Johnson company

Thrombin prepared inside or outside the sterile field

Prepare the way you prefer.

Thrombin preparation **inside or outside** the sterile field³

Focus on the procedure. SURGIFLO™'s preparation is simple.

Faster to prepare versus Floseal^{4††}

Vial adapter designed to eliminate needle sticks

*SURGIFLO™ Haemostatic Matrix (8 mL) versus Floseal Haemostatic Matrix (5 mL - CE version).

††Testing conducted with 24 nurses preparing both products

NOTE: Total preparation time was recorded from opening the box until the product is ready and the surgeon can apply product

Ordering Information

Item Code	Size	Package
MS0012	8 mL SURGIFLO™ Haemostatic Matrix Kit with Thrombin	1 kit
MS0010	8 mL SURGIFLO™ Haemostatic Matrix	1 kit
MS1995	34 cm Endoscopic Applicator	Box of 6

For more information or to place an order, contact Johnson & Johnson Customer Service SE +46 8 626 22 03, FI +358 207 531 502, DK +45 45 94 82 04, NO +47 66 77 47 04

Please always refer to the Instructions for Use / Package Insert which come with the device for the most current and complete instructions.

Surgiflo™

Thrombin prepared inside or outside the sterile field

SURGIFLO™ helps achieve visibility fast during critical moments

Haemostasis achieved within 60 seconds*
Shown to be effective at achieving haemostasis in cases of **mild oozing, moderate flowing blood, and pulsatile, spurting bleeding**^{2†}

*SURGIFLO™ was tested 16 times divided equally on 4 pigs.
†In animal models.

ETHICON | Shaping the future of surgery
PART OF THE *Johnson & Johnson* FAMILY OF COMPANIES

Thicker next generation matrix^{*5} is ideal for difficult-to-access areas.

Epidural gutter bleeding

Tumour bed bleeding

Difficult-to-access cardiac bleeding

Solid organ bleeding

Adherent

Stays in place even during active bleeding²

Precise

Malleable tip allows precise placement in difficult-to-access areas, cavities, and crevices

Packs better

Greater conformability and more tissue surface contact⁶

*When compared to previous generation of Surgiflo (MS0009).

SURGIFLO™ remains flowable throughout lengthy, complex procedures^{3,7}

The premoistened gelatin mixes uniformly with the thrombin to ensure the matrix retains consistency throughout the length of the syringe and for up to 8 hours^{3,7}

Variation in Matrix Flowability⁷

(As measured immediately after preparation[†])

† Each product was prepared following Instructions for Use.
‡ Average variation across 3 replicates. Based on in vitro viscosity testing of SURGIFLO™ 8 mL and Floseal Hemostatic Matrix 5 mL.

Take action.
Stop the bleeding.

Get the dual effect of SURGIFLO™ with Thrombin.

1. For bleeding that is difficult to access or when you cannot see the source of the bleeding, SURGIFLO's next generation thicker matrix^{*5} allows precise placement, reaches into irregular crevices, conforms to the tissue and stays in place during active bleeding.²

2. The flowable gelatin matrix provides an environment for platelets to adhere and aggregate within, building on the patient's natural coagulation cascade. Enhancing the tamponade of the gelatin matrix, the thrombin component of SURGIFLO™ acts as a catalyst and activates the patient's endogenous fibrinogen, accelerating clot formation.

3. Once bleeding has ceased, excess SURGIFLO™ can be gently irrigated away so as not to disturb the new clot. When used in appropriate amounts, SURGIFLO™ is absorbed completely within 4-6 weeks.³

*When compared to previous generation of Surgiflo (MS0009).
